

Optical Trapping Manipulation of Neutral Particl (Hardback)

By A. Ashkin

World Scientific Publishing Co Pte Ltd, Singapore, 2007.
 Hardback. Book Condition: New. 261 x 199 mm. Language: English . Brand New Book. This important volume contains selected papers and extensive commentaries on laser trapping and manipulation of neutral particles using radiation pressure forces. Such techniques apply to a variety of small particles, such as atoms, molecules, macroscopic dielectric particles, living cells, and organelles within cells. These optical methods have had a revolutionary impact on the fields of atomic and molecular physics, biophysics, and many aspects of nanotechnology. In atomic physics, the trapping and cooling of atoms down to nanokelvins and even picokelvin temperatures are possible. These are the lowest temperatures in the universe. This made possible the first demonstration of Bose-Einstein condensation of atomic and molecular vapors. Some of the applications are high precision atomic clocks, gyroscopes, the measurement of gravity, cryptology, atomic computers, cavity quantum electrodynamics and coherent atom lasers. A major application in biophysics is the study of the mechanical properties of the many types of motor molecules, mechanoenzymes, and other macromolecules responsible for the motion of organelles within cells and the locomotion of entire cells. Unique in vitro and in vivo assays study the driving forces, stepping motion, kinetics,...

Reviews

This pdf is great. It is actually rally exciting throught reading time. Your daily life span is going to be transform when you comprehensive reading this pdf.

-- **Francis Lubowitz**

A top quality ebook and the typeface used was interesting to read through. It is rally intriguing throught reading through period. You wont feel monotony at anytime of the time (that's what catalogues are for relating to when you ask me).

-- **Estelle Donnelly**
