Reviews

This book is definitely worth getting. It usually will not price too much. Its been printed in an extremely simple way in fact it is only right after i finished reading this publication where basically altered me, modify the way i think.

Springer, Netherlands, 2011. Paperback. Book Condition: New. 235 x 155 mm. Language: English . Brand New Book ***** Print on Demand *****.This book reports the text of the lectures given at Tabiano, Sal so- maggiore, Italy, during the Summer School on Bioenergetics and Thermodynamics: Model Systems, in May 1979. The aim of the School has been that of trying to employ the thermodynamic data on synthesised organic compounds with special reference to macrocyclic ligands for the interpretation and prediction of energetic processes involving small and large molecules. A detailed description of the origin, scope and plan of the School can be found in the introductory lecture by A. Braibanti. In appendix to this lecture there are listed some introductory books recommended to achieve a sufficient background in the different scientific fields contributing to the School. The audience consisted of about a hundred scientists belonging to different fields. Physical, organic, inorganic, pharmaceutical, analytical and medicinal chemists, biochemists, biophysicists, pharmacologists interested in the problems of calorimetry, potentiometry, spectroscopy, transport properties of synthetic and natural chelates and macromolecules spent two weeks to discuss topics ranging from thermodynamics to electrochemistry, from measurements on pure compounds to determinations on membranes. This picture of the audience is an indication of researchers which can be interested in this book. Softcover reprint of the original 1st ed. 1980.
